## 1. General Information

The following Polar HRM file format is used in Polar software products. The data includes the exercise information transferred from the following Polar products:

- Polar Sport Tester (PST)
- Polar Vantage XL (VXL)
- Polar Vantage NV (VNV)
- Polar Accurex Plus (Acc+)
- Polar XTrainer Plus (XTr+)
- Polar Coach
- Polar S610 / S610i / S625X
- Polar S710 / S710i / S720i / S725 / S725X
- Polar S810 / S810i
- Polar E600
- Polar AXN500, Polar AXN700
- Polar RS400, Polar RS800, Polar RS800X
- Polar CS400, Polar CS600, Polar CS600X

For further information about HR monitor specific features, see HR monitor user's manuals. Make sure to handle the HRM file version number correctly. Version modifications are marked with * and \#.

The data is stored in ASCII format. CR and LF (ODh and OAh) at the end of each line. There is one empty line between each data section. The data section name is separated from actual data always with brackets [ ].

The multiple data in one row are separated with tab, not with spaces.

## 2. General Parameters

| DATA | COMMENTS |
| :--- | :--- |
| [Params] | Basic settings |
| Version $=107$ | Exact hrm file version $\left(1.02,1.05^{*}, 1.06^{\#}, 1.07^{\&}\right)$. |
| Monitor $=1$ | Heart rate monitor type |
|  | 1 = Polar Sport Tester / Vantage XL |
|  | 2 = Polar Vantage NV (VNV) |
|  | 3 = Polar Accurex Plus |
|  | 4 = Polar XTrainer Plus |
|  | $6=$ Polar S520 |
|  | 7 = Polar Coach |
|  | $8=$ Polar S210 |
|  | $9=$ Polar S410 |
|  | $10=$ Polar S510 |

```
11 = Polar S610 / S610i
12 = Polar S710 / S710i / S720i
13 = Polar S810 / S810i
15 = Polar E600
20 = Polar AXN500
21 = Polar AXN700
22 = Polar S625X / S725X
23 = Polar S725
33 = Polar CS400
34 = Polar CS600X
35 = Polar CS600
36 = Polar RS400
37 = Polar RS800
38 = Polar RS800X
```

Mode=110
(abc)
With versions $\rightarrow 1.05$

SMode=11011010
(abcdefgh)
With versions 1.06

SMode=110110100
(abcdefghi)
With versions $1.07 \rightarrow$

Date=2004083
StartTime=14:23:36.0

Length=00:30:00.4

Data types:
a) Cad/Alt:
$0=$ Cad, $1=$ Alt, $3=$ None
b) CC data
$0=\mathrm{HR}$ data only, $1=\mathrm{HR}+$ cycling data
c) US / Euro unit
$0=$ Euro (km, km/h, m)
$1=\mathrm{US}$ (miles, mph, ft)
All distance, speed and altitude values depend on US/Euro unit selection (km / miles, km/h / $\mathrm{mph}, \mathrm{m} / \mathrm{ft}$ ).

Data type parameters
a) $\operatorname{Speed}(0=o f f, 1=o n)$
b) Cadence ( $0=0 \mathrm{ff}, 1=\mathrm{on}$ )
c) Altitude ( $0=\mathrm{off}, 1=\mathrm{on}$ )
d) Power ( $0=0$ off, $1=0 \mathrm{n}$ )
e) Power Left Right Balance ( $0=0 \mathrm{ff}, 1=0 \mathrm{n}$ )
f) Power Pedalling Index ( $0=0$ off, $1=0 n$ )
g) $\mathrm{HR} / \mathrm{CC}$ data
$0=\mathrm{HR}$ data only, $1=\mathrm{HR}+$ cycling data
h) US / Euro unit
$0=$ Euro (km, km/h, m, $\left.{ }^{\circ} \mathrm{C}\right)$
1 = US (miles, mph, ft, ${ }^{\circ} \mathrm{F}$ )
All distance, speed, altitude and temperature values depend on US/Euro unit selection (km / miles, $\mathrm{km} / \mathrm{h} / \mathrm{mph}, \mathrm{m} / \mathrm{ft},{ }^{\circ} \mathrm{C} /{ }^{\circ} \mathrm{F}$ ).
i) Air pressure $(0=\mathrm{off}, 1=\mathrm{on})^{\text {d }}$

Date of exercise (yyyymmdd)
For example 20040831means $31^{\text {st }}$ August 2004)
Start time (hh:mm:ss.d)
If hours are less than 10, format $\mathrm{h}: \mathrm{mm}$ :ss.d have also been used. Check time format by checking : character.
Length of exercise (hh:mm:ss.d)
If hours are less than 10, format h:mm:ss.d have also been used. Check time format by checking : character
03.11.09

| MaxHR=195 | Personal max heart rate (bpm) |
| RestHR=52 | Personal resting heart rate (bpm) |
| StartDelay=300 | RR Start delay (ms) (Vantage NV RR data only) |
| VO2max=50 | VO2max at time of exercise (for calories calculation) $\mathrm{ml} / \mathrm{min} / \mathrm{kg}$ \# |
| Weight=75 | Weight at time of exercise (for calories calculation) $\mathrm{kg}^{\text {\# }}$ |

## 3. Polar Coach Parameters

| DATA |  |  | COMMENTS |
| :---: | :---: | :---: | :---: |
| [Coach] |  |  | Polar Coach data section |
| 000128 |  |  | Coach flag data in bit fields |
| 0 | 0 |  | Recovery data ; result HR, result time (in seconds) |
| 0 | 0 |  | Interval data; HR average, interval time (in seconds) |
| 0 | 1175 | 26 | Target zone 1 data ; (below tz, in tz, above tz) in seconds |
| 0 | 0 | 0 | Target zone 2 data ; (below tz, in tz, above tz) in seconds |
| 0 | 0 | 0 | Target zone 3 data ; (below tz, in tz, above tz) in seconds |
| 128 | 164 |  | Average Hr of the exercise, maximum Hr of the exercise |

Flags 8 - bits are in use, (87654321), rest of the bits are reserver for future needs
8 bit, 1 = recovery not used
7 bit, 1 = negative recovery
6 bit, $1=$ recording in continuous interval mode
5 bit, 1 = interval mode used during recording
4 bit, 1 = time recovery calculation enabled during recording
3 bit, $1=$ HR recovery calculation enabled during recording
2 bit, 1 = Limit 3 enabled during recording
1 bit, 1 = Limit 2 enabled during recording
Note: Coach parameters are only from Polar Coach HR monitor.

## 4. Exercise Note

| DATA | COMMENTS |
| :--- | :--- |
| $[$ Note $]$ | Notes |
| Note $!$ | Max 250 ASCII characters |

## 5. HR Zones

| DATA | COMMENTS |
| :--- | :--- |
| [HRZones] | Heart rate zones used for this exercise |
| 190 | Zone 1 upper limit (bpm) |
| 180 | Zone 2 upper limit (bpm) = Zone 1 lower limit |
| 170 | Zone 3 upper limit (bpm) |
| 160 | Zone 4 upper limit (bpm) |
| 150 | Zone 5 upper limit (bpm) |
| 140 | Zone 6 upper limit (bpm) |
| 0 | Zone 7 upper limit (bpm) |
| 0 | Zone 8 upper limit (bpm) |
| 0 | Zone 9 upper limit (bpm) |
| 0 | Zone 10 upper limit (bpm) |
| 0 | Zone 10 lower limit (bpm) |

## 6. HR Limit Swaps

| DATA |  | COMMENTS |
| :--- | :--- | :--- |
| [SwapTimes] |  | Time when HR limits have been swapped between limits 1, <br> 2 and 3. By default the limits 1 are starting limits. Limit <br> index is zero-based. |
| $00: 10: 00.0$ | 1 | Time when limits have been changed to limits 2 <br> Time when limits have been changed to limits 3 |
| $00: 20: 00.0$ | 2 | Time when limits have been changed to limits 1 |

## 7. HR/CC Mode Swaps

HR/CC mode swaps are available only with Polar XTrainer Plus.

| DATA |  | COMMENTS |
| :--- | :--- | :--- |
| [HRCCModeCh] | Mode change |  |
| 00:00:0.0 32 | HR to CC (The change from HR measurement to cycling <br> measurement mode at time hh:mm:ss.d) |  |

03.11.09

## 8. Lap Times

| DATA | COMMENTS |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| [IntTimes] |  |  | Lap times |  |  |  |  |
| $00: 03: 43.7$ | 123 | 100 | 150 | 200 | Row 1 |  |  |

| Lap type | Lap | Power | Tempe | Phas | Air | Row 4* |
|  | Dist |  | rature | eLap | Pr |  |
| StrideAvg | Autom. <br> lap | 0 | 0 | 0 |  | Row $5^{\#}$ |

Row 1
Time Lap time in format hh:mm:ss.d
HR Momentary heart rate value in bpm
HR min Lap's minimum heart rate value in bpm
HR avg Lap's average heart rate value in bpm
HR max Lap's maximum heart rate value in bpm
Row 2
Flags Misc lap time information in 8 bits, 87654321
bit $8=$ Polar Coach lap/interval flag ( $0=$ lap, $1=$ interval $)$
bit $7=$ Int. time erased (for Conconi test, not included to calculation)
bit $6=$ Int. type ( $0=$ fixed, $1=$ from hrm)
bit $5=$ Extra data 3 ( $1=$ selected to draw)
bit $4=$ Extra data $2(1=$ selected to draw $)$
bit $3=$ Extra data 1 ( $1=$ selected to draw )
bits $1,2=$ Recovery ( $0=$ no rec, $1=$ Time rec, $2=\mathrm{HR}$ rec )

Rec. Time Recovery time (seconds)
Rec. HR
Recovery HR (bpm)
Speed Momentary speed in Xtrainer units (km/h or mph $=\mathrm{X} / 128$ )
Cad Momentary cadence (rpm)
Alt Momentary altitude (HRM version 1.02: $10 \mathrm{~m} / 10 \mathrm{ft}$, version $1.05 \rightarrow 1 \mathrm{~m} / 1 \mathrm{ft}$ )*
Row 3
Extra 1-3 Values of extra data series (0-3000) (the actual value is multiplied by ten)
Asc Lap ascent value from XTr+ $10 \mathrm{~m} / 10 \mathrm{ft}$
Dist Lap distance value from $\mathrm{XTr}+0.1 \mathrm{~km} / 0.1 \mathrm{ft}$
Row 4 ${ }^{\text {\# }}$
Lap type Lap type identifier, replaces flag 8 (Polar Coach lap/interval flag) value

| Type | Description | Type | Description |
| :--- | :--- | :--- | :--- |
| 0 | normal lap | 8192 | end of exercise |
| 1 | interval | 16384 | off road |
| 2 | start of exercise | 32768 | road |
| 4 | finishing line | 65536 | head wind |
| 8 | uphill | 131072 | tail wind |
| 16 | downhill | 262144 | Score / goal |
| 32 | service | 524288 | penalty |
| 64 | stopped | 1048576 | city/down |
| 128 | orienteering marker | 2097152 | navigation |
| 256 | u-turn | 4194304 | altitude calibration |
| 512 | summit / peak | 8388608 | crossroads |
| 1024 | sprint | 16777216 | landmark |
| 2048 | crash |  |  |
| 4096 | timeout |  |  |

Lap Dist Manually given lap distance in meters / yards, units are depending on US/Euro unit selection
Power Momentary power value in Watts
Temperature Momentary temperature value in Celcius / Fahrenheit, units are depending on US/Euro unit selection
PhaseLap Internal phase/lap information used for interval calculation
AirPr Air pressure value from AXN products
Row 5 \#
StrideAvg Stride average in cm (RS800, RS800CX only)
Autom.lap Automatic lap used (TRUE/FALSE) (RS and CS products)
The rest of the new lap time parameters are reserved for future usage. Lap times were formerly known as Intermediate times.

## 9. Lap Time notes

| DATA | COMMENTS |
| :--- | :--- |
| $[$ IntNotes] | Intermediate time note texts |
| 3 | Traffic lights |
| 5 | Interval | | Third intermediate time's note text. |
| :--- |

## 10. Extra Data Series

| DATA | COMMENTS |  |
| :--- | :--- | :--- |
| [ExtraData] |  | Extra data names and units (max 3 series) |
| Lactate |  | Extra data 1 name |
| mmol/I 15 | 0 | Extra data 1 unit, max value, min value |
| Power | 2000 | 0 | | Extra data 2 name |
| :--- |
| W |

## 11. HR Limit Summary

| DATA |  |  |  |  |  | COMMENTS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| [Summary-123] |  |  |  |  |  | File summary |
| 3780 | 10 | 40 | 3700 | 30 | 0 | Summary for limits 1 (row 1) |
| 195 | 160 | 80 | 52 |  |  | Limit values for limits 1 (row 2) |
| 0 | 0 | 0 | 0 | 0 | 0 | Summary for limits 2 (row 1) |
| 195 | 160 | 80 | 52 |  |  | Limit values for limits 2 (row 2) |
| 0 | 0 | 0 | 0 | 0 | 0 | Summary for limits 3 (row 1) |
| 195 | 160 | 80 | 52 |  |  | Limit values for limits 3 (row 2) |
| 0 | 756 |  |  |  |  | $756 \times 5$ secs/sample $=3780 \mathrm{sec}$ Maximum of 20 selections/file |

Row 1
$3780=$ Total time for selection in seconds ( $=10+40+3700+30+0)$
$10=$ Time in seconds when the HR was above maximum
$40=$ Time in seconds when the HR was between UL1 and maximum
$3700=$ Time in seconds when the HR was between UL1 and LL1
$30=$ Time in seconds when the HR was between LL1 and rest HR
$0=$ Time in seconds below rest HR
Row 2
195 = Max. HR
$160=$ Upper limit 1
$80=$ Lower limit 1
52 = Rest HR

Summary information for limits 2 and 3 follow the same pattern.
The row of selection
0 = Selection start sample
756 = Selection end sample

## 12. HR Threshold Summary

Row 1
$3780=$ Total time for selection in seconds (=10+40+3700+30+0)
10 = Time in seconds when the HR was above maximum
$40=$ Time in seconds when the HR was between upper TH and maximum
$3700=$ Time in seconds when the HR was between lower and upper TH
30 = Time in seconds when the HR was lower TH and rest HR
$0 \quad$ = Time in seconds below rest HR
Row 2
195 = Maximum HR
160 = Upper (anaerobic) threshold
$80=$ Lower (aerobic) threshold
52 = Resting HR
Row 3
0 = Selection start sample
756 = Selection end sample

## 13. Cycling Parameters

Cycling parameters are available from XTr+, S710, S710i, S720i, S725, S725X.

| DATA | COMMENTS |
| :--- | :--- |
| $[$ Trip $]$ | Cycling trip data |
| 87 | Distance $=8,7 \mathrm{~km} / \mathrm{mile}$ |
| 1400 | Ascent (hrm $1.0210 \mathrm{~m} / 10 \mathrm{ft}, \mathrm{hrm} 1.05 \rightarrow 1 \mathrm{~m} / 1 \mathrm{ft}$ ) * |
| 92982 | Total time in seconds |
| 1159 | Average altitude (HRM $1.0210 \mathrm{~m} / 10 \mathrm{ft}$, HRM $1.05 \rightarrow 1 \mathrm{~m} / 1 \mathrm{ft}$ ) * |

| 1304 | Maximum altitude (HRM $1.0210 \mathrm{~m} / 10 \mathrm{ft}, \mathrm{HRM} 1.05 \rightarrow 1 \mathrm{~m} / 1 \mathrm{ft})$ * |
| :--- | :--- |
| 1882 | Average speed $=1882 / 128=14,7 \mathrm{~km} / \mathrm{h} / \mathrm{mph}$ |
| 3396 | Maximum speed $=3396 / 128=26,5 \mathrm{~km} / \mathrm{h} / \mathrm{mph}$ |
| 418 | Odometer value at the end of an exercise, $418=418 \mathrm{~km} / \mathrm{mile}$ |

## 14. Heart Rate Data

The following data format is valid when there is only heart rate information in exercise file.

| DATA | COMMENTS |
| :--- | :--- |
| [HRData] | Heart rate data |
| 83 | Heart rate |
| 86 | When the recording interval is $5,15,60, \ldots$ seconds, the value of |
| 85 | the heart rate is between 0 and 250 bpm. |
| 94 | When the recording interval (=data type) is 238 (=R-R), the value |
| 103 | is R-R interval in milliseconds (=>HR[bpm] = 60000/RR). |
| 106 | When the interval is $204(=$ int times only), there are no |
| 107 | values, only the header "[HRData]". |

## 15. Extended Heart Rate Data

The following data format is for HRM versions $\rightarrow 1.05$

| DATA | COMMENTS |  |
| :--- | :--- | :--- |
| [HRData] <br> Heart Rates (bpm) | Speed <br> $(0.1 \mathrm{~km} / \mathrm{h} / \mathrm{mph})$ | Cadence (rpm) or Altitude <br> (m/ft, see below) <br> (optional field) |
| 86 | 161 | 770 |
| 94 | 165 | 770 |
| 107 | 118 | 770 |
| 108 | 126 | 790 |

Values are separated by tab characters.
Speed: If US units are used, speed value 165 means 16.5 mph . If Euro units are used, speed value 165 means $16.5 \mathrm{~km} / \mathrm{h}$.

Altitude: Altitude values with hrm version 1.02 in format $10 \mathrm{~m} / 10 \mathrm{ft}$ (to get correct value, multiply the altitude value by ten) and with hrm version 1.05 in format $1 \mathrm{~m} / 1 \mathrm{ft}$ *

Cadence: The cadence field is optional and available only when cadence was recorded into exercise file. The availability of cadence is saved into Mode $=\ldots(\rightarrow v 1.05$, a) Cad/Alt $=1$ ).

Air pressure: The air pressure field is optional and available only when air pressure was recorded into file. Air pressure can be saved with Polar AXN500 and AXN700 outdoor computers.

The following data format is for HRM version $1.06 \rightarrow$

| DATA | COMMENTS |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| [HRData] <br> Heart Rates <br> $(\mathrm{bpm})$ | Speed <br> $(0.1 \mathrm{~km} / \mathrm{h}$ or <br> $\mathrm{mph})$ | Cadence <br> $(\mathrm{rpm})$ | Altitude <br> $(\mathrm{m} / \mathrm{ft})$ | Power <br> $($ Watts $)$ | Power Balance <br> and Pedalling <br> Index |
| 83 | 173 | 81 | 760 | 325 | 12857 |
| 85 | 171 | 90 | 780 | 340 | 12857 |
| 94 | 165 | 92 | 770 | 335 | 12857 |

The following data format is for HRM version $1.07 \rightarrow$

| DATA | COMMENTS |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| [HRData] <br> Heart Rates <br> $(\mathrm{bpm})$ | Speed <br> $(0.1 \mathrm{~km} / \mathrm{h}$ or <br> $\mathrm{mph})$ | Cadence <br> $(\mathrm{rpm})$ | Altitude <br> $(\mathrm{m} / \mathrm{ft})$ | Power <br> $($ Watts $)$ | Power Balance <br> and Pedalling <br> Index | Air <br> pressure |
| 83 | 173 | 81 | 760 | 325 | 12857 | 1004 |
| 85 | 171 | 90 | 780 | 340 | 12857 | 1003 |
| 94 | 165 | 92 | 770 | 335 | 12857 | 1003 |

The cycling data fields are optional and are available if exercise contains cycling data.
The SMode field at [Params] section describes the data available.

- Speed is available if SMode $a=1$
- Cadence is available if SMode $b=1$
- Altitude is available if SMode c=1
- Power (watts) is available if SMode $d=1$
- Power (LRB and PI) are available if SMode e=1
- Air pressure is available if SMode $i=1$

Power LRB + PI: The second power value contains Left Right Balance (LRB) and Pedalling Index (PI) values in the following formula:

$$
\text { value }=\mathrm{PI} * 256+\mathrm{LRB}
$$

| PI bits 15-8 | LRB bits 7-0 |
| :--- | :--- |

$L R B$ is the value of left foot $\rightarrow$ for example if $L R B=45$, actual balance is $L 45-55 R$. PI values are percentages from 0 to 100. For example value 12857 ( $=40$ * $256+47$ ) means: $\mathrm{PI}=40$ and $\mathrm{LRB}=47=>\mathrm{L} 47-53 R$
