

Dear Valued Customer,

Commitment

Polar Electro is committed to support responsible sourcing practices. We share the same expectation with all our stakeholders. Polar Electro Responsible Minerals' program aligns with the [OECD Due Diligence Guidance](#); as such, we aim to proactively identify risks and progressively eliminate those with concern to our supply chain. Polar Electro conducts risk mitigation and due diligence appropriate to the nature of the risks as it pertains to our products, suppliers, or services.

Due Diligence

In alignment with Steps 2 and 3 of the OECD Diligence Guidance, Polar Electro continuously surveys its direct suppliers to verify the presence of [Smelters of Interest](#) (e.g. smelters or refiners that have shown red flag risks as per OECD Due Diligence Guidance).

The goal of the risk-based due diligence approach described above is to:

1. Educate the supply chain on current risks and concerns.
2. Support informed purchasing behaviors throughout the supply chain.
3. Encourage suppliers to perform similar due diligence activities on their end.

Polar Electro also engages directly with smelters in an effort to convey the importance of smelters undergoing independent audits to validate their sourcing as conflict-free or responsibly sourced. This due diligence outreach is performed in partnership with other companies who share the same commitments as Polar Electro.

Disclaimer

Polar Electro does not purchase minerals directly from mines, smelters, or refiners. Given the fact The Polar Electro is layers removed from upstream stakeholders, it is difficult to effectively influence their purchasing behaviors, especially within a short period of time.

Declarations (CMRTs) look retrospectively at procurement; so, at the time a CMRT is provided, material from smelters may already be part of the company's supply chain and products. Therefore, actions requesting immediate removal (stopping the use of material from a smelter) of a smelter of concern cannot always be fulfilled.

Due Diligence Partner

We partner with a third-party company, [Assent](#) to assist in our survey and compliance endeavors. Assent's Conflict Minerals due diligence program actively identifies and manages supply chain risks. It also helps gather, store, and validate conflict mineral data while streamlining supply chain communications with stakeholders in accordance with the OECD Due Diligence Guidance.
